Candidate Statement

I am an Assistant Professor of Biostatistics at the University of Washington. Before joining UW, I was a postdoctoral fellow in the Statistics Department of the Wharton School, University of Pennsylvania and I obtained my Ph.D. in Statistics from University of Wisconsin-Madison in 2019. My research is broadly about improving the appraisal of clinical trials and causal inference.

As an early career researcher, I have been actively involved in various activities in the profession, including reviewing journal articles, serving in a student paper award committee, and organizing and chairing invited sessions in meetings and conferences. The International Biometric Society (IBS) has an extraordinary tradition of bringing together biometricians around the world, with a united focus on scientific excellence. I will continue WNAR’s efforts to engage with researchers in and outside the field. I am also committed to supporting early career researchers and underrepresented groups in effective ways from reflecting on my own experiences, to ensure that everyone has the opportunity for success in biometrics.
